# SQpLosIon

Because it's a SQL injection we first tried the simple injection of   ' or 1=1#

We login successfully and got to the PUSH button

But were not authorized

Damn. Joe maybe already possess an anti-apocalypse machine. What is he up to? You have to get there before him.

This is important because we know Joe has access to the machine so we can try and login using is user.

We tried inject the following Joe' # and succeed!

Again we got the big PUSH button but this time we have authorization!!!

cd21{wh47_4N_SQpLos1on}

😊and we found the flag
